## DETAILED ACTION

### *Drawings*

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "16" has been used to designate both joist and top panel. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

2. New formal drawings are required in this application because the informal drawings previously submitted are of poor quality. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the Patent and Trademark Office no longer prepares new drawings.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rehbein in view of Clear and Morana (EP 0 485 297 A1).

Rehbein teaches all the limitations of the claims except panel with two layers. Rehbein teaches the use of deck blocks (1) to build a deck over substructure or joints (9), panel supports (3) support the panels on the deck, and panels are abutting at the ends to form a deck surface. Clear teaches a flooring panel with a top layer (14) that is

Art Unit: 3637

inflexible and made of concrete, adhesively secured to a lower flexible layer (18), both layers have substantially the same size, and square in shape (see Figure 1). Clear further teaches that the panels can be manufactured without the tongue and grooves. Morana teaches a well-known panel T-shaped panel support (9).

It would have been obvious for one skilled in the art at the time the invention was made to substitute the all wood block for a two layer panel since it is held to be within the general skill of a worker in the art to select a known material for the intended use as a matter of design choice.

It would have been obvious for one skilled in the art at the time the invention was made to substitute the Rehbein panel support for the Clear panel support since it is held to be within the skill of a worker in the art to select support panel as taught by Clear to provide a stronger support when using the two layer panel.

### ***Response to Arguments***

5. Applicant's arguments with respect to claims 1-19 have been considered but are moot in view of the new ground(s) of rejection.
